Units Since AutoCAD version 9, a new unit system was introduced. Prior to this, CAD programs had a new type of measurement called. The older system, the was based on a decimal metric system where the base unit

of length is the meter. The newer system uses two separate but compatible units: Length: the old and familiar (10-2628 mm) or (10-2628 m), which has a positive and negative prefix. Angle: is a new unit, with a prefix of rad and a range of 0 to 90 degrees. Area: is a new unit, with a prefix of deci and a range of 0 to 10,000,000,000 mm². Volume: is a new unit, with a prefix of du and a range of 0 to 10,000 m³. Distance: is a new unit, with a prefix of cm, m, or mm and a range of 0 to 3000 m. Area: is a new unit, with a prefix of mil, inch, and a range of 0 to 10,000,000 in². An object is always assigned the base unit of Length. Users can switch to the other units with the Units command. In 2017, AutoCAD introduced a new drawing unit system.

The new drawing unit system uses a superscript 'S' that indicates the drawing units. The new units are: Distance: The distance between two points, as specified in the standard ISO 2631:2004, is measured in metres or metres per second, depending on which of the two is given as the first character of the distance (note that one of the characters is the space character): m 'm', ms 'm/s'. The first character may not be a period (.) (since periods are used to separate units, not to indicate the unit of measurement). The distance between two points is measured in metres, feet, yards, millimetres, or metres per second. Area: The area of a surface, which is the area enclosed by a given line segment: m² 'm²', ft² 'ft²', yd² 'yd²', mm² 'mm²', m/s² 'm²/s²'◆ a1d647c40b
