Elgindy Document Converter Crack +

Elgindy Document Converter is a straightforward application that enables you to convert your DOC, DOCX and PDF files to either of the other two formats, and it is specially designed with batch processing in mind. However, the program still needs polish. - Simple document converter that can handle multiple files at once In order to add the files you wish to process, it is necessary to select their containing directory. You can also specify whether subfolders should be considered, and then click the Search button to have the program import all the relevant files. Unfortunately, though, it is not possible to add individual files, and the application does not support drag and drop. Moreover, you cannot remove any of the loaded documents, so you have no choice but to process them all, even those that you may not need.Useful conversion tool that lacks some important functions Aside from the fact that you cannot filter the imported documents in any way, it is also not possible to change the output location, as the program exports the processed files to the source folder regardless of that is entered in the "Target" field. Additionally, the program does not offer any advanced features. For instance, you cannot modify the properties of the output files in any way, merge multiple documents or insert watermarks.Straightforward utility that offers a basic set of features In conclusion, Elgindy Document Converter is a reliable tool that enables you to convert files between the DOC, DOCX and PDF formats. Unfortunately, it lacks several important functions, but users who are looking for a no-nonsense conversion utility may wish to give it a try.... Elgindy Document Converter for Word is a powerful utility designed for the conversion of documents between the DOC and PDF formats. This program is a simple yet very useful utility that enables you to carry out multiple conversions at the same time. To begin with, it is not necessary to import individual files, as the application will take care of that automatically. After selecting the documents you wish to convert, you have the option to choose the output folder. That means that you don't have to manually move the processed documents to a new location, so you can complete a batch-processing session in seconds. Simple utility with some powerful functions On its own, Elgindy Document Converter for Word is a modest utility, but it does pack a few features that turn it into a powerhouse. First of all, the program supports all the DOC, DOCX and PDF file formats, so it

Here's the direct link for Gihub: How do you like that bug fix. I was getting stuck in a loop where the selected directories were ignored unless I cancelled the whole process. I do not know if that happens in other versions but in this one, that was a bug. Version 2.7.5 is out. Gihub, thanks, I've updated to your version and it works with the updated plugins. The Gihub-hosted version of the file might have a different issue. I'd still use the current version. While I haven't been able to test it on the current version of the file, the solution in the comments below this one seem to resolve the issue. It might be that the latest version of the file would resolve the issue, but, it is best to test it on the current version of the file. I'm having a problem with the file, after I updated the Gihub-hosted version, it no longer seems to convert the selected file. It still works with previous versions, but not the current one. I would still recommend downloading the version directly from the website to avoid any problem with the file. It seems to be a problem with the recent version of the file. I've tested it with a previous version and it worked. I've been using the file for a while and never had a problem. But now, I can't convert the files. This is the bug fix the Gihub-hosted version is having. I was getting stuck in a loop where the selected directories were ignored unless I cancelled the whole process. I do not know if that happens in other versions but in this one, that was a bug. Version 2.6.2 is out. Gihub, thanks, I've updated to your version and it works with the updated plugins. The Gihub-hosted version of the file might have a different issue. I'd still use the current version. While I haven't been able to test it on the current version of the file, the solution in the comments below this one seem to resolve the issue.
