## What's New In AutoCAD?

Markup Assist is a powerful new tool for the AutoCAD user that makes it easier to turn CAD data into markups. With Markup Assist, all of the data necessary to create your markups is automatically extracted from the drawing, meaning there's no need to import or open the data. Additionally, users can set markups to be created from the current drawing's properties, meaning a single set of data is used for all of your markups. The new Markup Assist feature helps you perform all of the AutoCAD basics with a single click. Import and create markups, import updates and save them all to the current drawing. Create markups with the same data as the current drawing and add them as annotation or comments. Freehand and Sketch assist: Quickly draw freehand and sketch-based objects. Support for three new drawing styles, a new shape fill assist tool, improved fill detection and improved ink layer support are just a few of the new features in Freehand and Sketch. In this free-form creation tool, all of the features in the Drawing Style, AutoCAD Shape, Shape Fill and Line Styles toolbars are available. Rapid detection of freehand and sketch-based objects is now more accurate than ever. With new shape recognition technology, the tools in the Freehand and Sketch toolbars are now able to automatically detect three new drawing styles: loop, spline, and polyline. The new toolbars now also detect polyline fill and line styles. Freehand and Sketch also have new capabilities to work with the current drawing's properties. With new support for ink layers, a single set of data is used for all of the fill, line and shape styles. A new fill detection tool helps you fill in the white space between freehand and sketch-based objects. New Draw Order setting for shapes: Separate objects are easier to manipulate and view. The new Draw Order setting in the new Shape tab of the Drawing Style dialog lets you specify the drawing order in which you want to place your shapes. This feature is especially helpful when creating a template, allowing you to keep the parts that are common to all of your drawings but make the parts that need to be customized first. New Shape Style tool: Create simple forms with the new Shape Style tool. The new tool lets you create a variety of shapes with adjustable control handles, a 3D design surface,
