The "Auto" in AutoCAD stands for "automatic", and it refers to the ability of the program to draw complex drawings and shapes automatically. The "CAD" in CAD stands for "computer-aided design", and it refers to the ability of AutoCAD to draw 2D and 3D geometric shapes, symbols, and other visual components, and to combine these shapes, symbols, and components to create a drawing. AutoCAD features include 2D drafting and 3D modelling tools that enable users to draw, mark up, and edit 2D and 3D geometric shapes. The 2D drawing and 3D modelling tools include orthogonal drafting and 2D and 3D surfaces. The 2D drawing tools include text styles, perspectives, and guides. The 3D modelling tools include solids, surfaces, and 3D solid modelling. AutoCAD also features technical tools such as dimensioning, annotation, analysis, and illustration. The most commonly used AutoCAD functions are to move, rotate, scale, mirror, and extrude lines and shapes. AutoCAD also provides the user with the ability to view, print, export, and save drawings and templates. In addition, AutoCAD supports layers, named views, templates, naming conventions, and linetypes. The Spitfire and Tempest mark the pinnacle of warplane design. Their speed and agility, combined with great firepower, make them an irresistible weapon to any defender. But the Spitfire, Tempest, and their remarkable technology have not yet reached their full potential. With these new naval designs, the Allies are introducing the ultimate aviation war machine: the escort carrier. The mighty British fleet will now have its own small carriers to protect it. But the escort carrier is no match for the U-boat and the kamikaze pilot, and its weapons are obsolete. In 1942 the US air force faces problems of its own. The country's ever-growing air fleet requires a new medium bomber to counter the Reich's new ballistice bombers. But the US air force has no time to sit around and await new designs. So its design office taps new talent from its Far East and Pacific operations. With a tight deadline and limited resources, US designers decide to build their bombers from existing fighter plane design with new emphasis on performance. But they face the same challenges as the British, with new technologies arriving at the same time as the Allied planes they are designed to replace. On the first day of the Battle of Midway, Admiral Chester Nimitz's fleet of Japanese carriers received a major blow. Although the planes from the carriers attack proved to be invulnerable, the battle resulted in the damage of two of the Japanese carriers, and a loss of confidence by the Japanese command. America's greatest naval hero at the time, Raymond Spruance, takes the

A new paper in Science suggests that the evolution of the sense of humour may be linked to human social development. Researchers studying a fossil find of Australopithecus sediba, the oldest-known hominid to have lived during the age of the dinosaurs, report a small brow ridge present in early hominids similar to those in modern humans. They suggest that this suggests that Homo erectus evolved social wit and a sense of humour early in their history. As a broader implication, the authors suggest that the development of a sense of humour may have been linked to the evolution of social cooperation among early humans, and with it the development of complex social institutions. Who came first? The evolution of the sense of humour Over the past century and a half, experts have debated whether the sense of humour evolved relatively recently, such as with the emergence of Homo sapiens, or arose long ago with the emergence of hominids. Over the past half century, fossil finds of hominids such as Australopithecus and Homo habilis have shed some light on this question. Fossils from 2.6 million years ago, the age of the earliest hominid fossils, have shown that hominids already possessed a very advanced cranium and facial anatomy, much like that seen in later hominids. A single new finding from South Africa – the oldest known Homo erectus skull – adds another piece of evidence to the puzzle. With a cheekbone structure similar to that of modern humans, and a cranial volume similar to that of H. habilis, it has been suggested that Homo erectus must have had a fully-developed sense of humour. In the past, many have questioned the link between the development of the sense of humour and a fully-developed cranium. However, the new discovery suggests that Homo erectus must have had a fully-developed sense of humour. The article in Science reports on the fossil find of Australopithecus sediba, which lived about 2.5 million years ago. This hominid was discovered in 2008 in Malapa, South Africa
