Chapter 1 Learn Binary and Hexadecimal Numbers: Your value is a number and a value has a range. This value is represented in Hexadecimal and binary form, also known as hex and bin. Binary is the base-two representation of values, where 1 equals half, and 0 equals no-value. Binary numbers can be positive or negative. Hexadecimal or base-16 is the representation of values that is not inherently positive or negative. The binary representation of a value is made by converting values from binary to hexadecimal. To convert a Binary value to Hexadecimal, shift the value by 4 and add 0x30 to the result. The following is a sample of an input and output showing Binary and Hexadecimal: Input: 100 Output: 50 Hexadecimal: 33 Binary: 11 Chapter 2 Learn Basic String Concepts: A String is a series of characters. Strings are the digital representations of characters stored as data. Each character is considered to be a unit of information. In Computer Science, a string is simply a string of characters, unlike a linked list, a string is only a single series of data in memory. Think of a String as a sequence of characters, such as a sentence. Strings are held in memory to store information. The most common form of a string in a computer system is a string of characters. String objects are stored in memory as a contiguous block of characters. A single string has two parts, the length of a string and the data that the string holds. The data that a string holds is the characters between the left and right side of the string. This data can be of any type, like ASCII text data or a digit. Strings are used to represent other data types for the purpose of easy access. When a string object is instantiated, you specify the data type and the length of the string. All the characters in a string are the same type, all the characters are stored contiguously in memory and the string has a variable length. Strings are used

to store data that cannot be stored elsewhere. When you type a string, the length of the string increases by 1

If you've been following my work on this site, you may have noticed I've talked several times about a project called Steam's Edition, and more recently, Steam's Enhanced Edition. The work lies with the former and my focus today is on Steam's Edition in its current iteration (version 0.1) - adding another dimension to my look into the world of FSX: Steam Edition. First, I was interested in looking at Manhattan X - it's a mod which developed out of a community funded mapping project. Manhattan X was released in March of 2010 as a general world building mod, and was adapted to FSX in January of 2011. I was looking forward to reviewing the mod and see if it holds up against recent releases for FSX users. Manhattan X is developed by Far Out Aircraft, which has several other projects including a flight simulator and related media project. In terms of FSX versions, only Mac OS X and Windows (currently) are supported, although I believe Linux is under development as well. Please go to the forums and get more info on the project (yeah, I know Mac OS X is based upon a BSD but at least there's a forum section). I like to get a basic look at a product before I go any further. Well, it appears that the download only option is an install for the Windows version of the product, but the mod page includes a link that will open it for you. As with other mods this has a.WAD file. The first thing I did was to open up the WAD and take a look at the settings - not a bad model for a first look... there seems to be a little more dimension to the map than most I've seen. The "World Building Project Files" section on the Manhattan X Web site doesn't really tell us enough to really evaluate the quality of the product. There's a picture of the map and some info on the developers, but it doesn't really provide enough information for someone interested in the program to understand what's changed in the last five months. The developers aren't what we'd call professional. They like the wingnut aviation forum for

pictures that are pretty much useless. The "Plans" and "Development Goals" sections on their website are mainly about working towards major performance
