
tantalized me with its tantalizing possibility. I was slow and I wasn't very physical, though I liked to play through contact, unlike most 90 percenters. I was a pretty big dude — I towered over most of my opponents — and I got by on my quickness and vision. While I lacked the agility to make a beautiful pass, my ability to see where my teammates needed me to go turned me into a very valuable element on the court. I spent plenty of minutes in middle school and high school running back the ball, which stretched my stomach and forced me to lean forward and brace myself when I tackled guards. I took a pre-med class sophomore year to ease my parents' worry about the Ivy league's rosy pedigree of "soul-searching" and good grades. I liked it, but couldn't find enough material in any of my classes to make reading out of the window worthwhile. My four years of NCAA basketball were fun and interesting. In my junior year, I played for the Butler Bulldogs, somewhere in the middle of a vicious conference that could steamroll anyone who stepped onto the court. The Butler game plan relied on "embarrassing" teams — the crowd comprised nearly 30 percent of the opposing fans, and outward display of emotion was frowned upon. Coaches on the other side of the ball would resist my invitation to set screens for me, rather than forcing the issue; they'd buckle down when we got men to the free throw line, or fall behind on points because they didn't want to cede the advantage gained in bucket after bucket. It was oddly enervating to play on this team, because while it offered a stark contrast to the one I played on in high school, the spirit of the school took away a bit from the higher purpose. It was harder to convince my teammates to play with a spirit that we really ought not to show. Butler had a winning record that season, and I did, too. I was told that we needed to be more animated to reach a more-than-50-percent success rate at the free throw line — and certainly I wanted us to be better than 50 percent.
