Q: Why does the JDBC driver provide the `Connection.setAutoCommit` method when there is no transaction? I found this answer to a question about the JDBC autoCommit. @jdbcSupport.org (`Connection.setAutoCommit`) used with Oracle 8.x and Oracle 9i As part of the recommended practice for JDBC drivers to avoid repeating the setAutoCommit method for every new database connection, I looked at oracle_jdbc.java. The implementation of setAutoCommit is: /* * setAutoCommit(boolean autoCommit) * * The JDBC driver automatically commits each transaction on a connection * within a session. This means that calls to setAutoCommit() only take * effect on the next (or later) transaction if the new state is the same as * the previous one. */ public void setAutoCommit(boolean autoCommit) { setAutoCommitEnabled(autoCommit); return; } //... private synchronized void setAutoCommitEnabled(boolean autoCommit) { this.autoCommit = autoCommit; if (isOpen()) { checkTransactionType(); checkTransaction(); } return; }

DVR software in general is not very user friendly, and usually requires some customization to personalize the application to your liking. DVD Library Manager makes it very easy to find TV shows you have recorded, view the stored information and, if needed, edit the details. With this application, you will be able to streamline your TV watching experience and keep a really organized library of your favorite shows. Features: * Find and stream a TV show by simply entering the number of the episode, episode title, and the name of the show in the 'Search...' window. * If you don't know the name of a show you want to stream, you can browse through titles and episodes and chose from the list of all episodes from the TV series. * Select your favorite language and easily filter the search results according to the selected language. * View details of the selected episode, including the episode number, title, director, actors and production company. * Edit and update the DVD details, including the director, release date and MPAA rating. The application supports two popular websites to search for the necessary details. * A cover art can be added to any selected episode by simply dragging and dropping the image file found in the images folder. * Archive the DVD information or remove it in bulk by simply deleting all the files found in the DVD Cache folder. * You can edit the XML files you find in the Cache folder. * DVD Library Manager will search through all the movies in your Windows Media Center libraries. * Double clicking on a movie entry opens a new window, where you can easily edit the DVD details. From the director, the genre, the filming studio and the cast actors to the release year, all these details can be either customized by the user or downloaded from Amazon.com or IMDb. * You can view all the cover arts currently stored in your computer or add a new cover art from the images folder. * You can choose the output path in the 'Advanced Options' section, and add extra folders for your DVD information to be stored. * A custom search engine enables you to quickly find the needed information, even if you don't know the name of a TV show. * "Explore" section provides a convenient navigation tool that hides any file that is already stored in aa67ecbc25
