## What's new in Killing Zombies:

Legendary: We have managed to find the original batch of these precious replicas of Halo: CE's first map (from the DVD of the 1st map of Halo Custom Edition, or Rifter Edition). Most of the cards have been scanned with our new, high speed, computerized (ghosts and moirés inhere) camera. Starting with ReBalaiya, the remaining main art card of Halo CE has been scanned and added to this site. Each is in glorious full-color compared to the DVD scans. Now for the ones without the highlight. Hiidenheim needs some work before we have much of it. That strange belt-like light on the right in the back corner of the map photo. There is a vanishing point in that corner. We know the source of this as USM's guy Klaus took a great life-size photo of the map and made this as an overlay. The detail of this map is uncanny. The English name for this map "Smitten" was given from the original name, Hiccup. One of the foreigners added "Battlefield MVPs" to the game because there were many players with high scores (including 2000) on it. The white ring in the right side of the blue card shows where the map used to be removed from the picture. There is a perfectly aligned circle of tar where the map would have been. This circle was blasted open with a mortar in the early Halo competitive scene. Credits at the very top of the card are listed "Asim Productions, Klaus Decay". We really don't know when this was taken, but it was presumably taken very early on. The ReSire takes up a lot of space. Those strange gold and red lights seen here on his chest shine directly at us from afar. If we had dust on our eyes it might look like he is shooting a laser at the camera through a window or reflection in a mirror. If the light was to the right of the ReSire there would be only his helmet and shoulders visible, if it was to the left of him, only his chest would be exposed. Obviously with dust, glare, or our own eye type defects, this is not always the case. The ReSire's back is the first in our custom series of main characters to be born as a card. It was the inspiration for many more. ReSire's back is the first main character to be completely designed. I believe this is the first time we saw Halo made completely with this

And then run the online processing I get the following errors: Any suggestions? A: It might be related to Chrome, but my suggestion is to use a TypeScript Property for the [number]. Also check if you have the option "Use of any" selected. I am currently developing a few Angular 2 projects with Typescript and it is working fine. Use the ng-model, for example, on the input type="number" by typing "ng-model='test". Good luck.
