AutoCAD was first available in a version for the PC in 1984. Since then, AutoCAD has gone through multiple product releases that have included enhancements to the product's capabilities and functions. Today, AutoCAD is offered in versions for the PC, Mac, mobile, tablet and web. An AutoCAD version has been created for every type of computer, from PCs to mainframes. The development of AutoCAD for the PC started in 1984. In 1992, it was extended for use on the Macintosh. In 1998, the first AutoCAD version for mobile phones, PDAs and tablets was released. In 1999, AutoCAD Cloud was developed, which allowed cloud-based access to AutoCAD for the first time. Note: In the following sections, the terms Mac, PC, mobile, tablet and web refer to the different versions of AutoCAD that are available for these platforms. Also note that the term Windows refers to both the operating system and the graphics card that runs on the desktop or laptop computer that is running AutoCAD. The primary features offered by AutoCAD are to create 2D and 3D drawings. These drawings are used in a variety of industries and they can be from the smallest scale of .3 inches to a scale of 1/1,000,000. In addition, AutoCAD offers features that are specific to the type of object that you want to create, such as lines, blocks, dimensions, views, text and more.

Data exchange The Application Data Exchange Protocol (ADEP) is a protocol that allows data stored in the application to be exchanged across

versions of AutoCAD. ADEP is no longer supported, but ADEP2 (ADEP2.0 and ADEP2.1) is a similar protocol which works over the Internet and was introduced in AutoCAD 2017. ADEP2.0 is a two-way data format, where CAD files are sent as flat ASCII files over the Internet to the server, and CAD files are sent as a range of bytes from the server to the client.

Applications AutoCAD is marketed as a CAD and CAE application. Some uses include computer-aided design and drafting (CAD), computer-aided design and analysis (CAE), and reverse engineering. Other uses include orthographic, geographical, engineering, architectural, land use planning, civil and mechanical design. In addition, 3D Modeling has recently expanded to include architectural, landscape architecture, and interior design planning. AutoCAD 2019 has an improved, more intuitive 3D CAD interface (AutoCAD 3D). AutoCAD's reverse engineering product PowerDraft is used to extract data from the project file format associated with the AutoCAD system. AutoCAD 360° is a version that includes capabilities for creating, editing and viewing interactive 3D models and supporting collaborative interaction and project collaboration in real time.

It wasn't until the sixth grade that I truly understood that film was a living, breathing thing. As the 9th grade approached, the entire world was on the cusp of making the leap from reel to screen. Yet, for some reason, it didn't occur to me to think about that as a possible profession. It wasn't until I started taking filmmaking courses that I even realized it was something I could do. I saw other students who thought about the industry in such a way and found myself totally flabbergasted. In the end, I came to understand that film was a very personal profession, as much as it was a much wider one. Through my film classes, I learned the ins and outs of how to make a film, what are called "gags", and the technical aspects of what to shoot, and how to edit. I learned more about how to make a film than anyone I knew. For a long time, I avoided being in front of the camera. I wanted to try many different things, from acting to directing to working with a crew. My mind was open for everything. It was until I got my own camera that I finally realized I really wanted to be an actor. For the first time, I realized that filmmaking was going to be what would allow me to make a living. Yet, all this time I had been shooting in my free time, never thinking that I could do it professionally. I knew I wanted to do it, and I had all the necessary pieces, but in the end, I was being so selfish. In 8th grade, I'd gotten to experience a little bit of acting, and it was nothing special. While I was shooting my own shorts, I would shoot in front of a camera all the time, but the students I was working with were all terrible actors. The ones who did act would get the camera, and they would just repeat the same lines over and over. So, I started taking acting classes after school
